

SECTION 1 — IMPORT-READY SOURCE FILE

AP U.S. History Free-Response Practice Exam 8

APUSH-SAQ8-001

Section: SAQ

Type: written

Unit: Unit 8 — Period 8: 1945–1980

Period: Period 8: 1945–1980

Theme: SOC — Social Structures

Historical Reasoning: Comparison

Source Type: Secondary text source

Prompt:

Source A: Original secondary interpretation written for this practice exam, not an actual quotation. A historian of second-wave feminism argues that the women’s movement of the 1960s and 1970s grew mainly from legal and political campaigns for equal treatment. According to this interpretation, activists challenged discrimination in employment, education, credit, athletics, and public policy by using courts, legislation, and national organizations.

Source B: Original secondary interpretation written for this practice exam, not an actual quotation. A historian of grassroots feminism argues that the movement also grew from everyday experiences in workplaces, families, universities, medical settings, and local communities. According to this interpretation, consciousness-raising groups, women’s health activism, workplace organizing, and debates over sexuality and family life were as important as formal legal campaigns.

- (a) Describe one major difference between the two interpretations of second-wave feminism.
- (b) Explain one piece of historical evidence that supports the argument in Source A.
- (c) Explain one piece of historical evidence that supports the argument in Source B.

Scoring Guide:

Total Points: 3

- (a) 1 point: Describes a valid difference, such as Source A emphasizing formal legal and political equality while Source B emphasizes grassroots activism, personal experience, community organizing, and cultural change.
- (b) 1 point: Explains relevant evidence supporting Source A, such as the National Organization for Women, Title VII enforcement, Title IX, the Equal Rights Amendment campaign, anti-discrimination lawsuits, equal credit laws, or challenges to employment discrimination.
- (c) 1 point: Explains relevant evidence supporting Source B, such as consciousness-raising groups, women’s health clinics, workplace organizing, reproductive rights activism, feminist publishing, debates over domestic labor, or local campaigns against sexual harassment and gender inequality.

Model Guidance:

A strong answer should recognize that second-wave feminism included both institutional reform and grassroots activism. It should explain how legal equality campaigns and everyday experiences of discrimination reinforced one another rather than treating the movement as a single organization or issue.

Expected Points:

3

APUSH-SAQ8-002

Section: SAQ

Type: written

Unit: Unit 2 — Period 2: 1607–1754

Period: Period 2: 1607–1754

Theme: SOC — Social Structures

Historical Reasoning: Sourcing / POV / Purpose / Audience

Source Type: Primary text source

Prompt:

Source: Original simulated source based on historical context, not an actual quotation.

An enslaved woman speaking through an interpreter to an Anglican minister, South Carolina, 1742.

“The rice fields take strength from the body, and the fever takes many before harvest ends. Some people keep words from Africa in songs and in the way they bury the dead, though the overseer says such things must be forgotten. I have heard the minister speak of souls, but I ask whether a soul can be cared for while the body is sold away from husband, child, or kin.”

- (a) Identify one historical development that shaped the situation described in the source.
- (b) Explain how the speaker’s point of view likely influenced the concerns expressed in the source.
- (c) Explain one way the source reflects broader patterns of slavery or African cultural survival in colonial British North America.

Scoring Guide:

Total Points: 3

- (a) 1 point: Identifies a relevant development, such as the expansion of plantation slavery, rice cultivation in South Carolina, the growth of enslaved African labor in the southern colonies, the Atlantic slave trade, disease environments in rice plantations, or Anglican missionary efforts among enslaved people.
- (b) 1 point: Explains that the speaker’s point of view as an enslaved African or African-descended woman shaped concerns about forced labor, disease, family separation, cultural survival, religious conversion, and the contradiction between Christian teaching and slavery.
- (c) 1 point: Explains a broader pattern, such as the development of plantation societies, high mortality in rice-growing regions, preservation of African cultural practices, formation of kinship networks under slavery, resistance to cultural erasure, or the use of Christianity in debates over enslavement and humanity.

Model Guidance:

A strong response should connect the source to plantation slavery in the colonial South while also recognizing enslaved people’s cultural agency. It should avoid describing enslaved people only as laborers and should address family, religion, memory, and survival.

Expected Points:

3

APUSH-SAQ8-003

Section: SAQ

Type: written

Unit: Unit 3 — Period 3: 1754–1800

Period: Period 3: 1754–1800

Theme: MIG — Migration and Settlement

Historical Reasoning: Causation

Source Type: Non-text source

Prompt:

Source: Described map created for this practice exam.

The map is titled “Federal Land Policy and the Northwest Territory, 1785–1795.” It shows a grid of surveyed townships north of the Ohio River, proposed sections reserved for public schools, land sales areas, forts near the Ohio River, and Native towns not included within the rectangular survey lines. A note explains that federal officials promoted orderly settlement and land sales while Native nations continued to claim and defend much of the territory.

- (a) Describe one goal of federal land policy reflected in the map.
- (b) Explain one historical factor that contributed to the development of the land policy reflected in the map.
- (c) Explain one consequence of the land policy or settlement pattern reflected in the map.

Scoring Guide:

Total Points: 3

- (a) 1 point: Describes a valid goal, such as orderly settlement, raising federal revenue through land sales, creating townships, supporting public education through reserved sections, encouraging western migration, or extending federal authority over the Northwest Territory.
- (b) 1 point: Explains a relevant factor, such as post-Revolutionary land claims, the need to pay national debts, western settlement pressure, the Articles of Confederation government’s land ordinances, state cessions of western claims, or the desire to create new states from western territories.
- (c) 1 point: Explains a relevant consequence, such as increased migration into the Old Northwest, conflict with Native nations, creation of new states, land speculation, expansion of federal authority, public-school land grants, or the establishment of a model for territorial expansion.

Model Guidance:

A strong answer should connect the map to federal land ordinances and western settlement after the Revolution. It should also recognize that surveyed land grids did not erase Native sovereignty or prevent conflict over land.

Expected Points:

3

APUSH-DBQ8-001

Section: DBQ

Type: written

Unit: Unit 7 — Period 7: 1890–1945

Period: Period 7: 1890–1945

Theme: PCE — Politics and Power

Historical Reasoning: Causation

Source Type: Seven-document set

Prompt:

Evaluate the extent to which public health and consumer-protection concerns changed the role of government in American society from 1890 to 1920.

Document 1

Author/Origin: Original simulated report by a municipal health inspector, New York City, 1894; based on historical context, not an actual quotation.

Source Type: Government inspection report excerpt.

“Several tenement blocks contain rear buildings with little light or air. Privies overflow after rain, and milk is stored in rooms where sick children sleep. Landlords state that rents cannot support improvements, yet disease does not remain within one hallway. The city must treat housing as a public health matter.”

Sourcing Cues: The report reflects the perspective of a local official arguing for expanded municipal responsibility over housing and sanitation.

Document 2

Author/Origin: Described neighborhood health map created for this practice exam, Chicago, circa 1902.

Source Type: Described map.

The map shows several crowded immigrant and working-class neighborhoods near stockyards, rail lines, and factories. Shaded areas mark high rates of tuberculosis and infant mortality. Dots identify public baths, settlement houses, milk stations, and clinics. Wealthier residential districts on the edge of the map show fewer shaded areas and more open space.

Sourcing Cues: The map connects disease patterns to industrial urban geography, class inequality, and reform institutions.

Document 3

Author/Origin: Original simulated statement from a meatpacking worker to a state labor investigator, Illinois, 1905; based on historical context, not an actual quotation.

Source Type: Testimony-style excerpt.

“The floor is slick, the knives move fast, and spoiled pieces are trimmed until they look fit enough to sell. A man who complains is told there are others waiting outside. The public sees a wrapped package, not the blood, speed, and fear that put it there.”

Sourcing Cues: The testimony reflects the perspective of an industrial worker linking workplace conditions to consumer safety.

Document 4

Author/Origin: Original simulated editorial from a national women’s club journal, 1906; based on historical context, not an actual quotation.

Source Type: Reform editorial excerpt.

“Mothers are expected to guard the health of the household, but no mother can inspect a cannery, test every bottle of medicine, or trace every cup of milk to its source. Honest labels and public inspection are not attacks on business; they are protections for families.”

Sourcing Cues: The editorial reflects middle-class women reformers’ use of maternal and household authority to support regulation.

Document 5

Author/Origin: Summary of federal food and drug legislation, Washington, D.C., 1906.

Source Type: Government policy summary.

The law prohibited the interstate sale of foods and drugs that were adulterated or falsely labeled. Supporters argued that national markets required national standards. Critics warned that federal inspection could burden producers and expand government authority over private business.

Sourcing Cues: The summary reflects federal responses to consumer-protection concerns in a national industrial economy.

Document 6

Author/Origin: Infant health data table created for this practice exam, selected U.S. cities, 1900–1918.

Source Type: Data table.

The table is titled “Selected Public Health Reforms and Infant Mortality.”

City | Common reforms adopted by 1918 | Reported trend

New York | milk stations, visiting nurses, tenement regulation | infant mortality declined

Chicago | sanitation campaigns, settlement clinics, food inspection | infant mortality declined

Philadelphia | clean milk campaigns, public health education | infant mortality declined

Smaller industrial cities | reforms uneven or delayed | mixed results

A note beneath the table states: “Public health improvements varied by city, funding, enforcement, and neighborhood access.”

Sourcing Cues: The table emphasizes both reform gains and uneven implementation.

Document 7

Author/Origin: Original simulated statement from a small food manufacturer to a business association, Ohio, 1912; based on historical context, not an actual quotation.

Source Type: Business association statement.

“We do not defend fraud. But each new inspection form, label rule, and factory standard costs money that large corporations can absorb more easily than small firms. Reformers say regulation protects the public, but poorly designed regulation may also drive independent producers out of business.”

Sourcing Cues: The statement reflects business concerns about costs, competition, and the uneven effects of regulation.

Scoring Guide:

Total Points: 7

Thesis / Claim — 1 point: Earns the point for a historically defensible claim evaluating the extent to which public health and consumer-protection concerns changed the role of government in American society from 1890 to 1920. The thesis must make an argument, such as that these concerns significantly expanded municipal, state, and federal regulation of housing, food, medicine, sanitation, and industry, though enforcement remained uneven and contested by business interests.

Contextualization — 1 point: Earns the point by describing broader relevant context, such as urbanization, industrialization, tenement growth, national markets, Progressive reform, muckraking journalism, women’s reform activism, immigration, scientific management, or the expansion of administrative government.

Evidence from the Documents — 2 points: Earns 1 point for accurately using content from at least three documents to address the prompt. Earns 2 points for using content from at least six documents to support a coherent argument about housing regulation, urban disease, industrial food production, women’s reform activism, federal consumer legislation, public health campaigns, or business opposition.

Evidence Beyond the Documents — 1 point: Earns the point for using at least one specific, relevant piece of outside evidence not found in the documents, such as *The Jungle*, Pure Food and Drug Act, Meat Inspection Act, settlement houses, *Jane Addams*, tenement reform, muckrakers, Florence Kelley, public health departments, child labor reform, or state factory inspection laws.

Sourcing / Analysis of Documents — 1 point: Earns the point by explaining how or why the point of view, purpose, audience, or historical situation of at least three documents is relevant to the argument. For example, a student might analyze the health inspector’s municipal reform purpose, the map’s use of data to justify intervention, the worker’s view of unsafe production, the women’s club journal’s maternalist audience, the federal law summary’s national-market context, or the manufacturer’s concern about regulatory costs.

Complexity — 1 point: Earns the point by demonstrating a nuanced argument, such as explaining

that reform expanded government authority while relying on local enforcement; showing that consumer protection connected private households to public regulation; distinguishing public health, labor safety, and business regulation; or recognizing that reforms could protect consumers while burdening small producers or leaving poor communities underserved.

Model Guidance:

A strong DBQ would likely argue that public health and consumer-protection concerns significantly expanded the role of government in American society from 1890 to 1920. Students should connect urban disease, industrial food production, national markets, women's reform activism, and Progressive Era regulation. Effective document groupings include urban housing and disease, industrial production and consumer safety, women reformers and household protection, federal regulation, public health data, and business resistance. Relevant outside evidence could include *The Jungle*, Pure Food and Drug Act, Meat Inspection Act, muckrakers, settlement houses, Jane Addams, Florence Kelley, tenement reform, or state factory inspection laws.

Expected Points:

7

APUSH-LEQ8-001

Section: LEQ

Type: written

Unit: Unit 6 — Period 6: 1865–1898

Period: Cross-Period / Thematic

Theme: WXT — Work, Exchange, and Technology

Historical Reasoning: Continuity and Change Over Time

Source Type: Broad historical prompt with introductory statement

Prompt:

From the end of the Civil War through the early twentieth century, industrial capitalism changed how many Americans worked. Wage labor, large corporations, mechanized production, national markets, new managerial systems, immigration, migration, and union organizing reshaped relations between workers and employers. At the same time, older inequalities of race, gender, skill, and class continued to influence access to jobs and power in the workplace.

Evaluate the extent to which industrial capitalism changed the relationship between workers and employers in the United States from 1865 to 1920.

Scoring Guide:

Total Points: 6

Thesis / Claim — 1 point: Earns the point for a historically defensible thesis that evaluates the extent to which industrial capitalism changed worker-employer relations from 1865 to 1920. The thesis must make an argument about continuity, change, or both.

Contextualization — 1 point: Earns the point by describing broader context relevant to industrial labor, such as post-Civil War railroad expansion, corporate consolidation, immigration, urbanization, mechanization, national markets, economic depressions, or the growth of wage labor.

Evidence — 2 points: Earns 1 point for identifying at least two specific pieces of relevant evidence, such as Knights of Labor, American Federation of Labor, Haymarket, Homestead Strike, Pullman Strike, Great Railroad Strike of 1877, company towns, scientific management, sweatshops, child labor, women's industrial labor, Chinese railroad labor, closed shops, injunctions, or the Clayton Antitrust Act. Earns 2 points for using at least two pieces of evidence to support an argument about change and continuity in worker-employer relations.

Historical Reasoning — 1 point: Earns the point by explaining continuity and change over time, such as showing how large-scale industrial capitalism shifted power toward corporations and managers while workers developed unions, strikes, and political strategies to resist or negotiate

workplace authority.

Complexity — 1 point: Earns the point by developing a nuanced argument, such as distinguishing skilled from unskilled labor, comparing craft unionism and industrial unionism, explaining differences by race, gender, ethnicity, and region, or showing that industrial capitalism created new forms of worker dependence while also creating new forms of collective action.

Model Guidance:

A strong LEQ should explain how industrial capitalism altered workplace power, not simply list strikes. It might argue that large corporations, mechanization, and national labor markets increased employer control over wages, hours, and conditions, while unions and strikes represented new worker responses. Strong responses should also recognize continuities and limits: workers remained divided by skill, race, gender, ethnicity, and legal status, and government often sided with employers during major labor conflicts.

Expected Points:

6

SECTION 2 — SERIES DO-NOT-REPEAT BANK UPDATE — DO NOT IMPORT

SERIES DO-NOT-REPEAT BANK UPDATE — APUSH-FRQ8

· APUSH-SAQ8-001: Unit 8; Period 8: 1945–1980; perspectives include modern secondary historians of second-wave feminism as legal-political equality activism and grassroots everyday-life activism; source type is paired secondary text interpretations; source viewpoints contrast formal campaigns through courts, laws, and national organizations with consciousness-raising, health activism, workplace organizing, and family/sexuality debates; historical development is second-wave feminism in the 1960s and 1970s; reasoning path is comparison; misconception targeted is treating feminism as a single-issue or single-organization movement rather than a broad set of legal, political, workplace, cultural, and community campaigns.

· APUSH-SAQ8-002: Unit 2; Period 2: 1607–1754; perspective is enslaved woman in colonial South Carolina speaking through an interpreter to an Anglican minister; source type is original simulated primary text; source viewpoint emphasizes rice-field labor, disease, family separation, African cultural retention, burial practices, songs, and religious contradiction; historical development is plantation slavery and African cultural survival in colonial South Carolina; reasoning path is POV/purpose/audience connected to gender, slavery, religion, labor, and cultural survival; misconception targeted is treating enslaved people only as plantation labor rather than as people preserving kinship, culture, memory, and spiritual life under coercion.

· APUSH-SAQ8-003: Unit 3; Period 3: 1754–1800; perspectives include federal land officials, western settlers, speculators, Native nations, territorial communities, and education advocates; non-text source type is described federal land-policy map; visual/data/map pattern is Northwest Territory township grid, school sections, land sales, forts, and Native towns outside survey logic; historical development is federal land ordinances, territorial expansion, and settlement in the Old Northwest after the American Revolution; reasoning path is causation linking debt, land policy, orderly settlement, Native resistance, public education, and federal authority; misconception targeted is assuming surveyed land grids meant uncontested ownership or peaceful settlement.

· APUSH-DBQ8-001: Unit 7; Period 7: 1890–1945; DBQ topic is public health and consumer-protection concerns changing the role of government from 1890 to 1920; document types include municipal health inspection report, described neighborhood health map, meatpacking worker testimony, women’s club reform editorial, federal food and drug legislation summary, infant health data table, and small food manufacturer business statement; document perspectives include

municipal health officials, urban working-class residents, industrial workers, middle-class women reformers, federal lawmakers, public health reformers, consumers, and small business owners; main argument paths include urban disease, tenement regulation, industrial food safety, maternalist reform, national consumer standards, uneven public health gains, and business resistance to regulation; outside evidence possibilities include *The Jungle*, Pure Food and Drug Act, Meat Inspection Act, settlement houses, Jane Addams, tenement reform, muckrakers, Florence Kelley, public health departments, child labor reform, and state factory inspection laws; sourcing opportunities include municipal reform purpose, mapped disease data as evidence for intervention, worker testimony on hidden production conditions, women reformers' household-protection argument, national-market context for federal law, and small business cost concerns; visual/data/map types include described urban health map and infant mortality/public health reform data table.

· APUSH-LEQ8-001: Units 6–7; Periods 6–7 / Cross-Period; LEQ topic is industrial capitalism's impact on the relationship between workers and employers from 1865 to 1920; historical reasoning process is continuity and change over time; evidence categories include Knights of Labor, American Federation of Labor, Great Railroad Strike, Haymarket, Homestead Strike, Pullman Strike, company towns, scientific management, sweatshops, child labor, women's industrial labor, Chinese railroad labor, injunctions, closed shops, and Clayton Antitrust Act; complexity path is distinguishing skilled/unskilled labor, craft/industrial unionism, race, gender, ethnicity, region, corporate power, legal repression, and worker collective action; misconception targeted is treating Gilded Age labor history as only strikes or only robber barons rather than a changing workplace power relationship shaped by corporations, managers, workers, unions, courts, and government.
